## ABSTRACT:

PROBLEM TO BE SOLVED: To prepare a water-in-oil emulsified cosmetic, good in feeling of use, emulsification stability and makeup lasting and excellent in refreshing feeling when applied to skin, further good in dispersibility of a powder and excellent in ultraviolet light protecting effects.

SOLUTION: This water-in-oil type emulsified cosmetic comprises dimethylpolysiloxane, a condensate of a glycerol ester of a fatty acid with a dicarboxylic acid, an oil having an inorganic organic balance (IOB) value within the range of 5-30, a powder and water. The condensate of the glycerol ester of the fatty acid with the dicarboxylic acid is an oligomer condensate obtained by esterifying a mixture comprising the glycerol, a higher straight-chain fatty acid, an aliphatic dicarboxylic acid and a higher branched aliphatic monocarboxylic acid. A hydrophobic powder can be used as a part or the total amount of the powder and a particulate powder is formulated to sustain high ultraviolet light preventing effects.
